Introduction

Anti Mould Paint Additive is a premium quality low odour anti mould concentrate. It prevents mould growth by incorporating the biocide within the paint film itself.

Special features

- Add to any paint type
- Easy to mix
- Non Flammable
- Low odour
- 50cc per 2.5 litre can of paint

DESCRIPTION

Anti Mould Paint Additive is a colourless concentrate which added to paint provides long term protection to walls and ceilings against mould growth. It can be added to any type of paint.

USES

As a paint additive to prevent mould growth in paint coatings

PREPARATION & METHOD

Thoroughly clean all wall and ceiling surfaces to remove fungal debris and all other loose and organic material (e.g. mouldy wallpaper, etc). Make good any surface defects.

Wash and clean all surfaces with **Mould Killer Concentrate** to kill existing mould growth (otherwise this may re-grow and penetrate through the paint film).

Add the concentrate to the paint and thoroughly stir. Paints treated with this product can be applied over wallpaper and can be colour tinted using any proprietary tinting system.

TECHNICAL DATA

Active Substance

Biocides based on N-Formals and Isothiazolinones Inerts.

Other Components

Glycol

Corrosion

No action (no special priming on metals)

Aggressivity to other materials

None known

Concentration

Allow 1 x 50cc per 2.5 litre of emulsion or gloss paint

WARNING

Do not paper or paint over the anti mould treated paint or you will prevent it from acting and mould will re-grow.

Special Note

Always allow the Surface Cleanser to dry onto the cleaned surface, to provide residual chemical to continue killing the mould beneath the new paint film.
